Portfolio

BACHELOR OF APPLIED SCIENCE - CHEMICAL ENGINEERING
BACHELOR OF SCIENCE - COMPUTING TECHNOLOGY

ABOUT ME

Technical Skills Salesforce (Apex, LWC, Flows, SOQL, UI-API), Java, Spring, Python, React, SQL RESTful (Web Services, Microservices).
Web Development Skills HTML5/CSS3/JavaScript, WordPress

WORK EXPERIENCE

Salesforce Developer – Speridian Technologies Canada   Toronto ON September 2021 – Date

Communicate with clients daily to understand their business processes and how we can help improve these current processes through in-person and video chat meetings.

Collaborate with team to build multiple highly optimized Trigger frameworks to help business processes involving:
- Sending files to Azure blob storage and appropriate clean-up of files on successful response.
- Efficiently updating lookup records upon field changes on child records.

Collaborate with team to utilize REST API to expose Apex RestResources for retrieval of:
- Access, External storage tokens
- JSON format of required record values.

Collaborate with team to leveraged User Interface API in designing a React native Progressive Web App which includes:
- Querying field values from records using SOQL for use in the PWA.
- Creating records of SObjects and custom objects through the PWA.
- Creating files utilizing the ContentVersion SObject through the PWA.
- Retrieving metadata for page layouts on SObject's record types and building a like for like version using Material UI components on the PWA.

Collaborate with team to configure a Server to Server JWT bearer flow connecting with an Azure B2C environment.
- Utilized OpenSSL to create an X509 certificate.
- Using this certificate as a digital signature, set up a connected app to provide user authentication.
- Configured output claims passed on a successful B2C login to allow for authorization to the sandbox.
- Created permission sets and modified profile permissions to grant pre-authorized users access.
